

# Revan Alfiandri Fauzi

Informatics Undergraduate | Aspiring Data Engineer | AI & Automation Builder

Bandung, Indonesia | [revanalf5@gmail.com](mailto:revanalf5@gmail.com) | [github.com/donEvab](https://github.com/donEvab) | [instagram.com/vaansta](https://www.instagram.com/vaansta) | [wa.me/6282121484618](https://wa.me/6282121484618)

## Profile

I'm an Informatics undergraduate at Telkom University with a strong interest in Data Engineering, AI, and Automation. I enjoy building end-to-end data pipelines, automating workflows, and solving real-world problems using Python, SQL, and modern data tools.

## Core Skills

|               |         |        |                 |            |                   |
|---------------|---------|--------|-----------------|------------|-------------------|
| Python        | SQL     | Java   | C++             | PostgreSQL | MySQL             |
| ETL / ELT     | Airflow | dbt    | Docker          | Power BI   | Excel             |
| Google Sheets | Git     | GitHub | API Integration | n8n        | Gemini/OpenAI API |

## Featured Projects

|                                            |                                                                                                                                                                                                                                                             |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PerpusYUK Library Management System</b> | A web-based library management system for books, members, borrowing flows, and administrative records. Focused on practical CRUD flows, database-backed features, and deployable public demo.                                                               |
| Tech                                       | Java, JSP, MySQL, Railway, GitHub   Demo: <a href="https://perpusyuk-web-production.up.railway.app/login.jsp">perpusyuk-web-production.up.railway.app/login.jsp</a>   Repo: <a href="https://github.com/donEvab/perpusYUK">github.com/donEvab/perpusYUK</a> |
| <b>AI Automation Workflow</b>              | Automation workflow concept for connecting APIs, processing structured inputs, and using AI services to reduce repetitive manual work.                                                                                                                      |
| Tech                                       | n8n, API Integration, Gemini/OpenAI API, workflow automation                                                                                                                                                                                                |

## Education

|                    |                                                                  |
|--------------------|------------------------------------------------------------------|
| University         | Telkom University - Informatics                                  |
| Senior High School | SMAN 18 Bandung                                                  |
| Junior High School | SMP Pasundan 1 Bandung - Grade 7; SMPN 38 Bandung - Grade 8 to 9 |

## Learning Journey

2025: Python, API, and Automation Fundamentals | 2026: Data Engineering Roadmap | Current: Building hire-ready portfolio projects | Next: Data Engineer Internship / Junior Data Engineer
