

Portfolio Color System

Revan Alfiandri Fauzi - professional dark and light mode palette for a data engineering portfolio.

Design Direction

The website uses a restrained professional palette: dark neutral foundations, a focused violet primary color, and a warm accent used sparingly. Glass effects should appear only on high-value surfaces such as the header, hero profile, resume callout, and subtle hover states. Regular content cards should stay cleaner and more solid for readability.

Usage Rules

Background	Use dark or light foundation colors as the main page environment. Keep decorative orbs low contrast.
Cards	Use solid surfaces for skills, projects, education, and contact cards. Avoid glassmorphism on every card.
Primary violet	Use for main buttons, active hover states, section labels, and timeline dots.
Accent warm color	Use only as a subtle glow or secondary visual warmth, not for primary text.
Text hierarchy	High contrast for titles, muted color for body copy, uppercase violet labels for section context.
Borders	Thin borders only. They should separate layers without making the layout feel noisy.

Quick Reference

Primary button: violet-tinted surface with thin violet border. Secondary button: neutral surface with subtle border. Contact and project links should share the same button rhythm for consistency. The final feel should be focused, modern, and internship-ready instead of overly decorative.
